

NOVA Gas Transmission Ltd.

Non-Critical Notice

Notice Type: Other
Effective Date: January 1, 2019
Subject: Pressure, Temperature Service – Edmonton Area

A customer has approached NGTL with a request to modify the operation of the Integrated NGTL System for their benefit. NGTL continually optimizes the pipeline system and based on current conditions would generally not operate in the mode requested by the Customer to move requested volumes at the requested pressure. The Customer requesting the operational modifications will be charged with the incremental operating and fuel costs associated with the change in operation. A map of the affected area can be seen in Attachment 1. If NGTL does proceed to implement the modified mode of operation, typical operating conditions would change at the following location:

Stations	Mnemonic	Stn #	With PT Service (kPa)			Without PT Service (kPa)		
			Min P	Typical P	Max P	Min P	Typical P	Max P
Vantage APN	VANTG	30371	N/A	6000-7000	9930	N/A	5500-6500	9930

The proposed service is estimated to be available for service requestor's use roughly 50% of the time.

Please review this information and if you feel your company will be negatively affected by this change please notify NGTL in writing with the nature and magnitude of the impact. NGTL will review all information submitted by Customers in consideration of this service requirement and assess NGTL's ability to proceed with the service. If there are no concerns the service may proceed without further notice, however, if there are unresolved concerns the service will not proceed until the concerns have been resolved. Please note the information you provide will upon request be treated as privileged and confidential.

NGTL would like to proceed with the preparations required to implement this request as soon as possible, therefore, please respond within 10 business days.

If you have any questions please call your Customer Account Manager, or alternatively Sherri Harbaruk at 403-920-5597 or email at sherri_harbaruk@transcanada.com.
